## Description

MaxGoWindows is a software running in the background. It provides a couple of device-specific features as well as functions to customize the unit.

For example:

- Enabling/disabling hardware modules like WiFi, Bluetooth, 5G, GPS
- Custom hardware key assignment
- Touch modes
- Screen rotation and brightness
- Start camera app
- Information, battery status, versions, ...

MaxGoWindows will be automatically started together with Windows.

It has a system tray icon with the possibility to show/hide and exit MaxGoWindows app.

By default the MaxGoWindows menu will be shown with pressing the menu-key.

It's settings will be stored in the file "MaxGoWindows.ini, which is located in the configuration file path. See below at "Files".

MaxGoWindows is developed for Algiz 10XR in C# for .NET Framework 4.

Dependencies:

- HH\_SDK for Algiz 10X

Files:

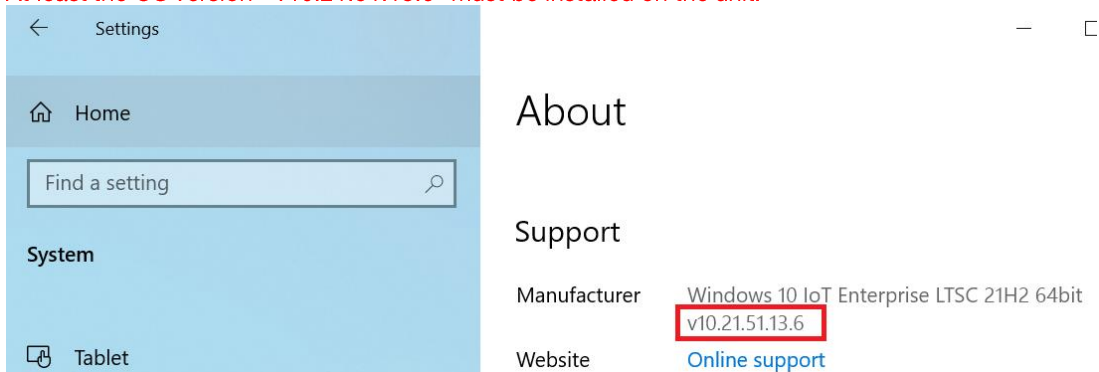

Default path is "C:\Program Files (x86)\MaxGoWindows

Configuration file path "C:\Users\[User](#)\AppData\Local\MaxGowindows

## Installation

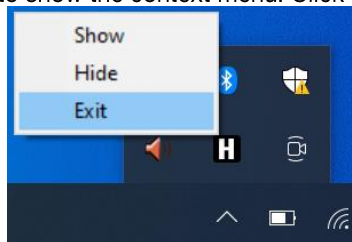

### Requirements:

At least the OS version " v10.21.51.13.6" must be installed on the unit:

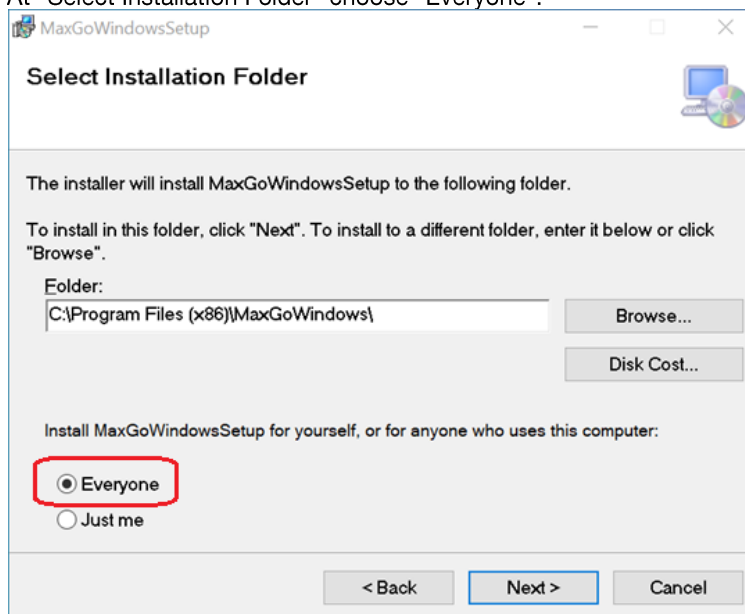

### Instruction:

1. If the app "RavenControlPanel" is installed, then uninstall it:  
Go to Settings > Apps and uninstall "RavenControlPanel" also known as "RCP v..." or "DorisKeypad".  
Restart the unit after uninstallation is done.
2. If "MaxGoWindows" is running, then exit it.  
Click on the MaxGoWindows icon to show the context menu. Click on <Exit>:

3. Download and run MaxGoWindows installation:
4. <https://download.handheldgroup.com/apps/MaxGoWindows/MaxGoWindowsSetupv0.0.0.5.msi>
5. At "Select Installation Folder" choose "Everyone":

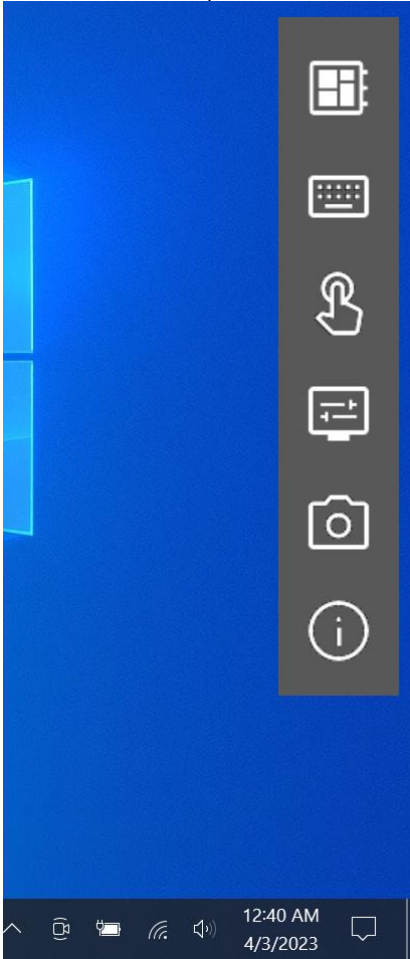

6. Restart the unit after installation is done.

## Instructions

### Show MaxGoWindows

- There are several options in order to show the MaxGoWindows menu

1. Press the menu-key  to show MaxGoWindows menu
2. Click the MaxGoWindows icon in the tray menu. Click on "Show":

3. Start MaxGoWindows by double clicking it's shortcut on the Desktop

or double click "MaxGoWindows.exe" at default path.

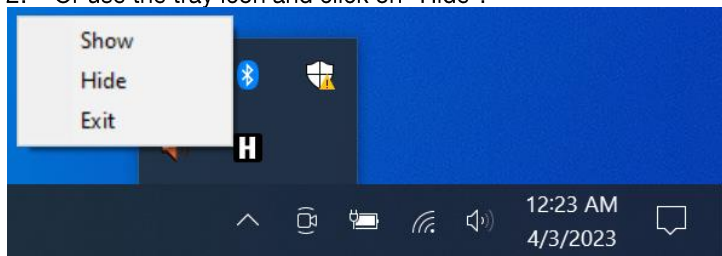

**Note:** It might be, that functions of menu-key and lock-key are interchanged.

If this is the case, let Bernhard Kriechhammer know.

Because it seems to be a difference between pre-production and mass-productions units.

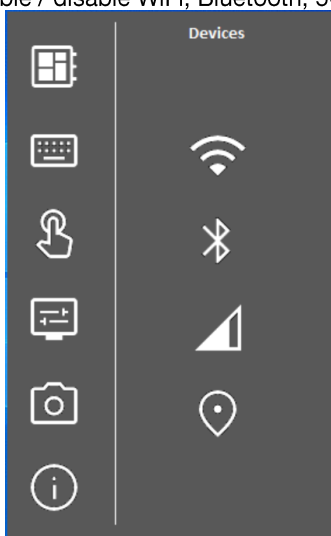

## Hide MaxGo Windows

1. Click somewhere on the screen outside MaxGoWindows and then it will automatically hide.
2. Or use the tray icon and click on "Hide":

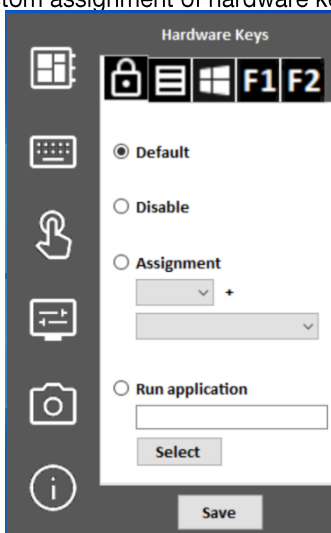

## Menu

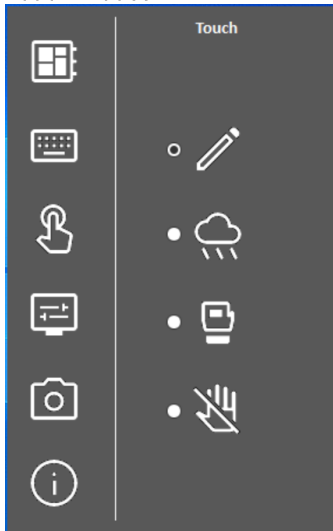

1. Enable / disable WiFi, Bluetooth, 5G and GPS:

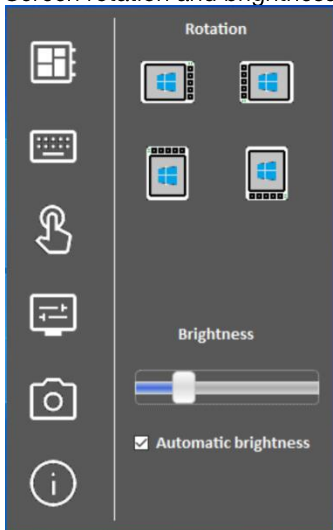

2. Custom assignment of hardware keys:

3. Touch modes:

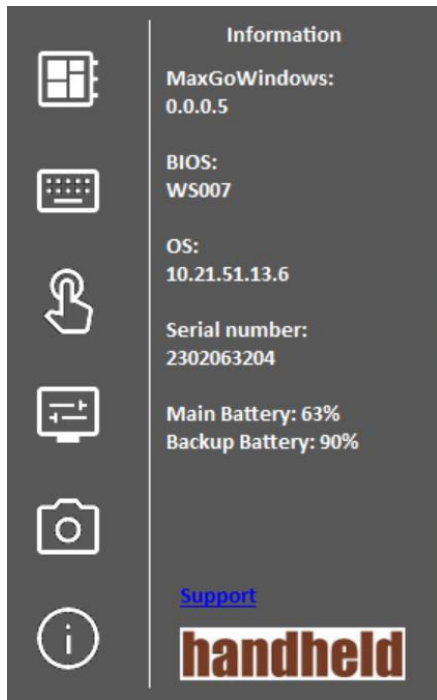

4. Screen rotation and brightness:

5. Start camera app:

6. Information:

The image shows a vertical information panel with a dark grey background. On the left side, there is a vertical column of six white icons: a window icon, a keyboard icon, a hand cursor icon, a battery icon, a camera icon, and an information icon (a lowercase 'i' inside a circle). To the right of these icons, the text is organized into sections. At the top, the word 'Information' is centered. Below it, the following details are listed: 'MaxGoWindows: 0.0.0.5', 'BIOS: WS007', 'OS: 10.21.51.13.6', and 'Serial number: 2302063204'. A section for battery status follows, showing 'Main Battery: 63%' and 'Backup Battery: 90%'. Below the battery information is a blue underlined link labeled 'Support'. At the bottom of the panel is the 'handheld' logo, which consists of the word 'handheld' in a bold, brown, sans-serif font with a white outline, set against a white rectangular background.

Information

MaxGoWindows:  
0.0.0.5
